

Topic: Public Works Report

For Meeting Date: March 2, 2022

Report Date: March 1, 2022

Prepared by: Luke Lockhart

Transportation:

- We have been out most days with the sand truck to keep ahead of the ice; we have also started to widen out many of our streets by hauling away, or pushing back windrows wherever we can.
- We have brought a 1 ton load of road patch in to warm up to patch the big potholes that have emerged; primarily on Saskatchewan Ave. and will be patching later this week.

Utilities:

- See full utilities report
-

Environmental Health:

- We have received pricing for the landfill scale software, and operating system, and have presented it to administration for review, and approval.

General Public Works:

- Work has begun at the old depot building to better utilize the space, to provide our facilities maintenance team with a workshop area, and to provide a much better animal pound area. The majority of work will be done in house; however certain tasks will be required to be contracted. We are in the process of acquiring options, and pricing to incorporate the North end of the big bay as a dedicated wash bay as well.
